Problem 1 — Name text cut off

Issue:
In the hero section, the letter **“g” in my name “El Rhareg” is partially hidden/cut off**.

Fix:
Adjust the text container, padding, or overflow so the **full name is always visible** on all screen sizes.

Additional fix:
Remove the **mouse gadget / circular cursor indicator shown at the bottom-left corner**, as it is unnecessary and distracts from the design.

Problem 2 — Text hover interaction

Issue:
The large hero text currently has no visual response when the cursor passes over it.

Fix:
When the cursor passes over the text, it should **reveal a white neon glow effect**, making the text appear highlighted while the cursor is on it.
The effect should follow the cursor smoothly and disappear when the cursor leaves.

Problem 3 — About section text alignment

Issue:
In the **About Me section**, the paragraph text is **not perfectly aligned with the statistic cards** on the right.

Fix:
Adjust spacing so the **text block and the cards start at the same vertical height**, creating a cleaner visual balance between the left text and the right statistics.

Problem 4 — Statistics squares design

Issue:
The four statistic boxes (40K+, 6, 3, 4+) are not perfectly consistent with the other card components on the website.

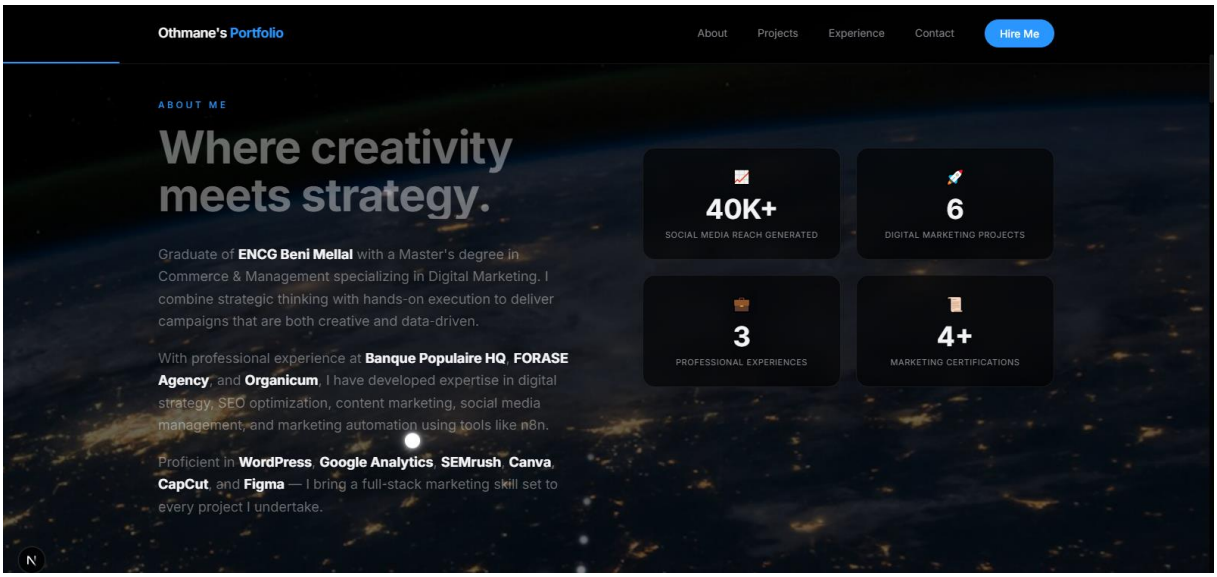
Fix:
Redesign them as **clean, evenly sized square cards**, using the same **border radius, glow, spacing, and visual style** as the other UI cards on the site.
They should also be **properly aligned with the text block in height** and maintain equal spacing between each other.

Problem 5 — Background inconsistency

Issue:
In the **About Me section**, the background currently shows a **planet/space image**, which is different from the rest of the website background.

Fix:
Replace this background with the **same background used across the rest of the website** so the design remains visually consistent.
All sections should share the **same dark gradient/particle style** instead of introducing a different image.

Reference screenshot :



Problem 6 — Tools & Technologies section

Issue:
In the **Tools & Technologies section**, the icons representing the tools I use are currently **too small and not visually emphasized**.

Fix:
Increase the **size of the tool icons** so they are more visible and impactful. The icons should remain evenly spaced and centered inside the container while maintaining the same design style (rounded container, glow, spacing).

Additional additions:
Add two more tools to the list:

1. **VN Video Editor** — include the **VN application logo (PNG)**.

2. **Antigravity** — include the **Antigravity logo (PNG)**.

These new tools should be integrated in the same row with the others and follow the **same icon style, size, spacing, and hover effects** as the existing tools.

Problem 7 — Professional Experience order

Issue:
In the **Professional Experience timeline**, the experiences are not fully ordered based on chronological date. The timeline should always follow a clear time progression to avoid confusion.

Fix:
Reorder the experiences so they are **sorted strictly by year**, following a chronological timeline. The most recent experience should appear first.

Ensure the **timeline dots and connecting line also follow this chronological structure**, maintaining the same spacing and alignment.

Problem 8 — Footer text alignment and size

Issue:
In the **footer section**, the descriptive text ("Digital strategist. Data-driven marketer.") appears too small and does not start clearly from the **left alignment of the section**, which makes the layout feel slightly unbalanced.

Fix:
Increase the **font size of the footer description text** so it is easier to read and visually stronger.
Also ensure the text **starts aligned from the left side of the footer container**,

following the same left alignment used in the other sections of the website.

The goal is to make the footer **consistent with the site's typography hierarchy and layout structure**.
